Importing IngentaConnect references into RefWorks via text

Ingenta does not offer the ability to directly export search results to RefWorks.

1. After performing a search in Ingenta, click to open the full citation of an article of interest. Only one reference can be copied at a time.

2. At the right under Tools, click –Reference exports- and select BibTeX

3. Copy all of the text from the resulting box. (If importing more than one reference repeat above for each reference and paste the texts into one document.)

4. Return to RefWorks and select Import from the References pull-down menu.

5. Under the Import Filter/Data Source dropdown menu, scroll down to select BibTeX. At Database select Bibdesk (BibTex format)

6. Click on the From Text link to open text box.

7. Paste copied text into box.

8. Select folder at Import into Folder and then click the Import button.

RefWorks will tell you when the import is complete and how many references were imported.
